ADVANTAGES OF PLANNED MAINTENANCE

LOWER MAINTENANCE COSTS

Proactive and planned maintenance has proven to lower costs by catching small service issues before they blossom into giant repair headaches.

IMPROVE USEFUL EQUIPMENT LIFE

Equipment that is serviced regularly does not have to be "turned over" as frequently. This lowers your equipment costs over time.

INCREASED PRODUCTIVITY

Equipment that is well maintained does not break down. This improves productivity as well as your bottom line performance.

INCREASED RESIDUAL VALUES

When you trade-in your equipment, or sell it to purchase new equipment, well maintained equipment has proven to have higher values than equipment serviced on an "as needed" basis.

ENHANCE FACILITY SAFETY

Forklift equipment failures can have catastrophic consequences. Properly maintaining your equipment will improve operator safety as well as those that work around your equipment.

ELECTRIC INTERNAL COMBUSTION*

ROCK & DIRT*

SERVICE PERFORMED

- Change engine oil filter*
- Change engine oil*
- Lubrication: Steering, Grease Fittings, Mast, etc.
- Check Fluid Level: Drive Axle, Transmission, Battery, Brakes & Hydraulic System - Top off as Needed
- Blow off entire truck - if needed
- Test drive to verify proper function
